CURRENT INTEREST

In 25 years working in NYarchitectural offices I was project architect on some a number of fine buildings, but my interests turned back to my innovative environmental science research in 2008. My "4D Sustainability" goes furtherer than other methods, toward finding a project's place in its ecology of living systems. Partly that's by using my method of whole system impact assessment, for measuring the true coupling of a project to its impacts on the earth, offering a sound comprehensive and comparable measure of sustainability!

I'd be interested in consulting on sustainability science on teams doing high quality architecture and sustainable design. I also offer scientific research and consulting on the development, behavior, relationships and design of interventions in naturally occurring environmental systems.

SUMMARY

Published Research Scientist on environmental systems and sustainability, Project Architect, Wide Experience in Public Buildings, Design, Detailing, Design Science, Sustainable design methods, Peer Review, CA; ACAD Revit

EDUCATION

University of Pennsylvania, Masters of Fine Arts in Architecture,
St. Lawrence University, B.S. physics
